Variance Inflation Factors (VIF)

Model 2a (bond years): maximum dyadic DSI = 1.14, kinship [non-kin vs. kin] = 1.14

Model 3 (non-kin vs. kin): number of available kin = 1.05, age = 1.04, rank = 1.01, group size = 1.03

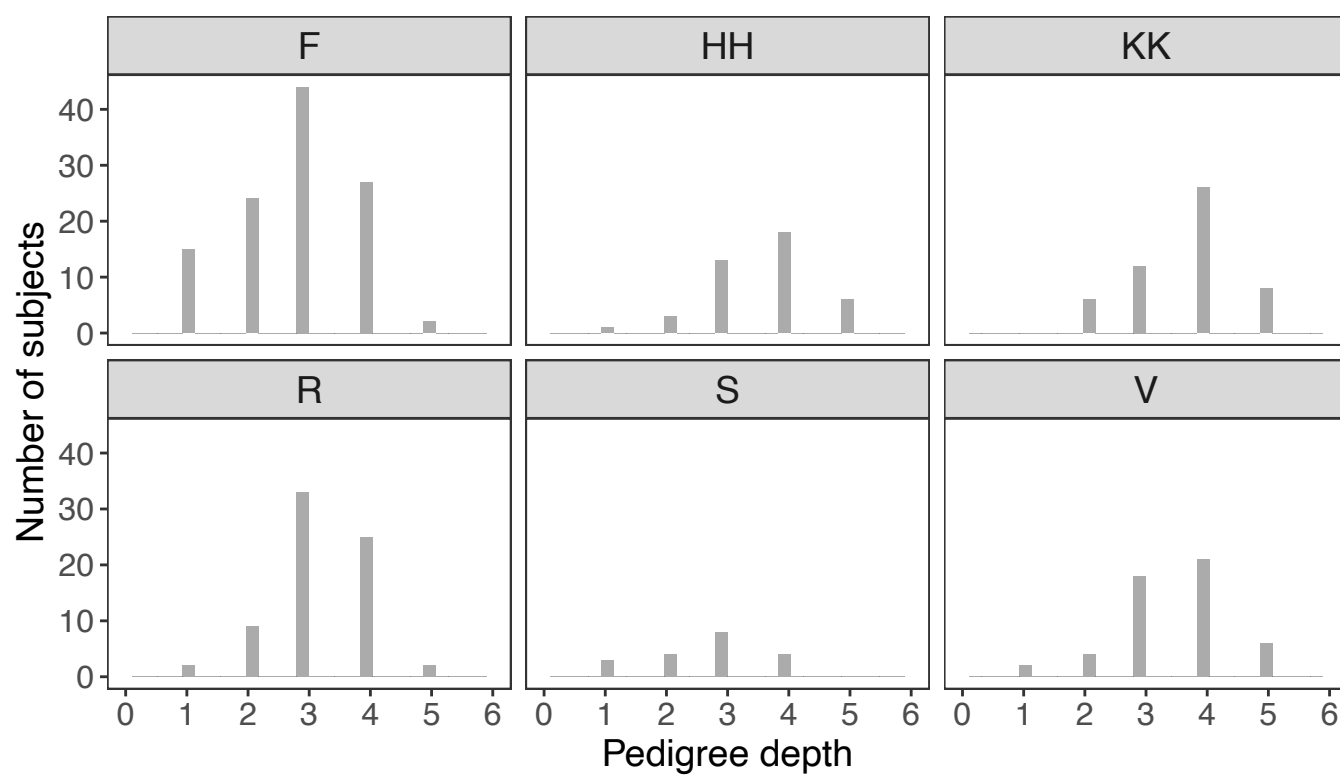

Figure S1. Distribution of pedigree depth for the 347 subjects from the six social groups.

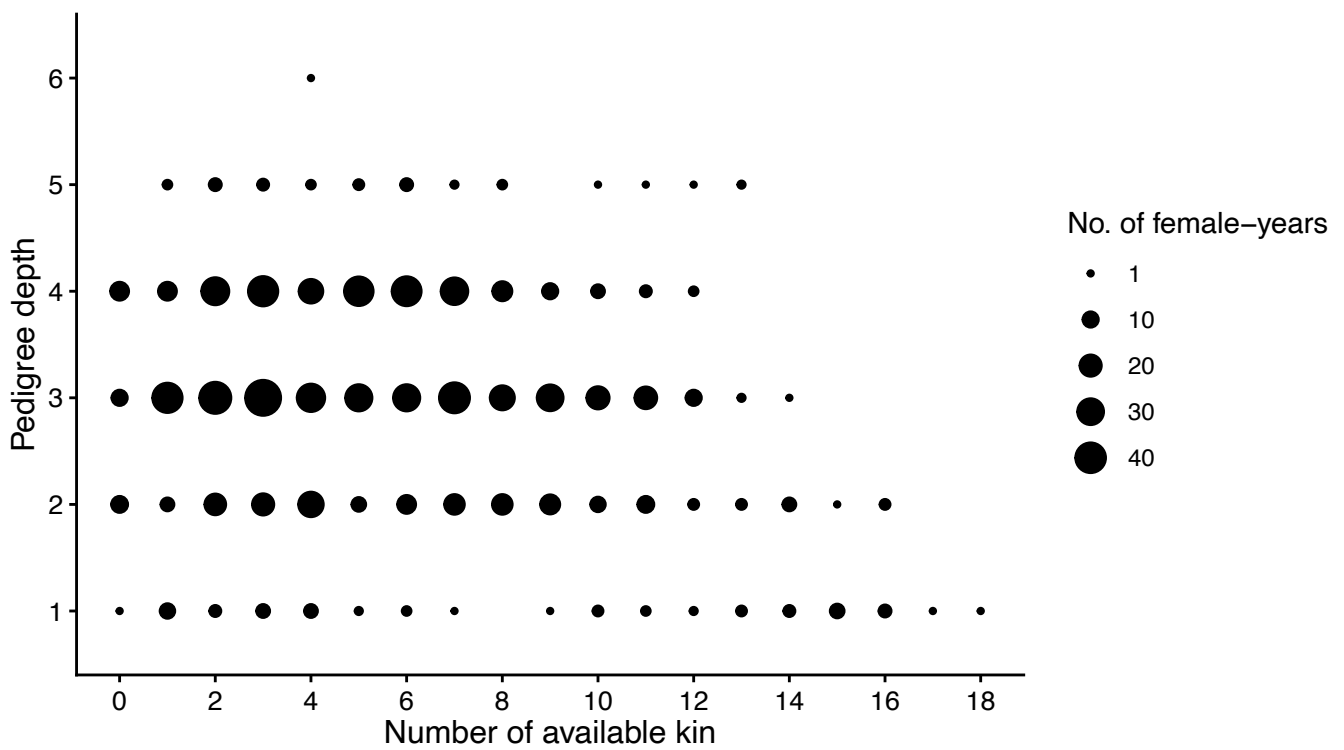

Figure S2. Number of available kin as a function of pedigree depth. Although some of the subjects have few available kin, this was not caused by a lack of information on their pedigree.
